

SmaBlu

AI for enterprise data infrastructure optimisation

Every time we

Upload a photo

Stream a video

use an LLM

it travels through **data centers.**

Data Centres Have Huge Enviroirmental Impact

Energy Consumption by 2026

Data Centres Globally – 600 TWH

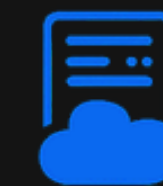

United Kingdom – 300 TWH

Germany – 500 TWH

Data Centre's Carbon Emission Exceed Aviation Inudstry

Share of Global CO₂ Emissions by Sector

Data Centres

3.7%

Aviation

2.5%

Shipping

1.9%

The problem

AI is set to triple infra consumption by 2030.

Source: International Data Corporation (IDC) and McKinsey

Why can't enterprises optimize data infra?

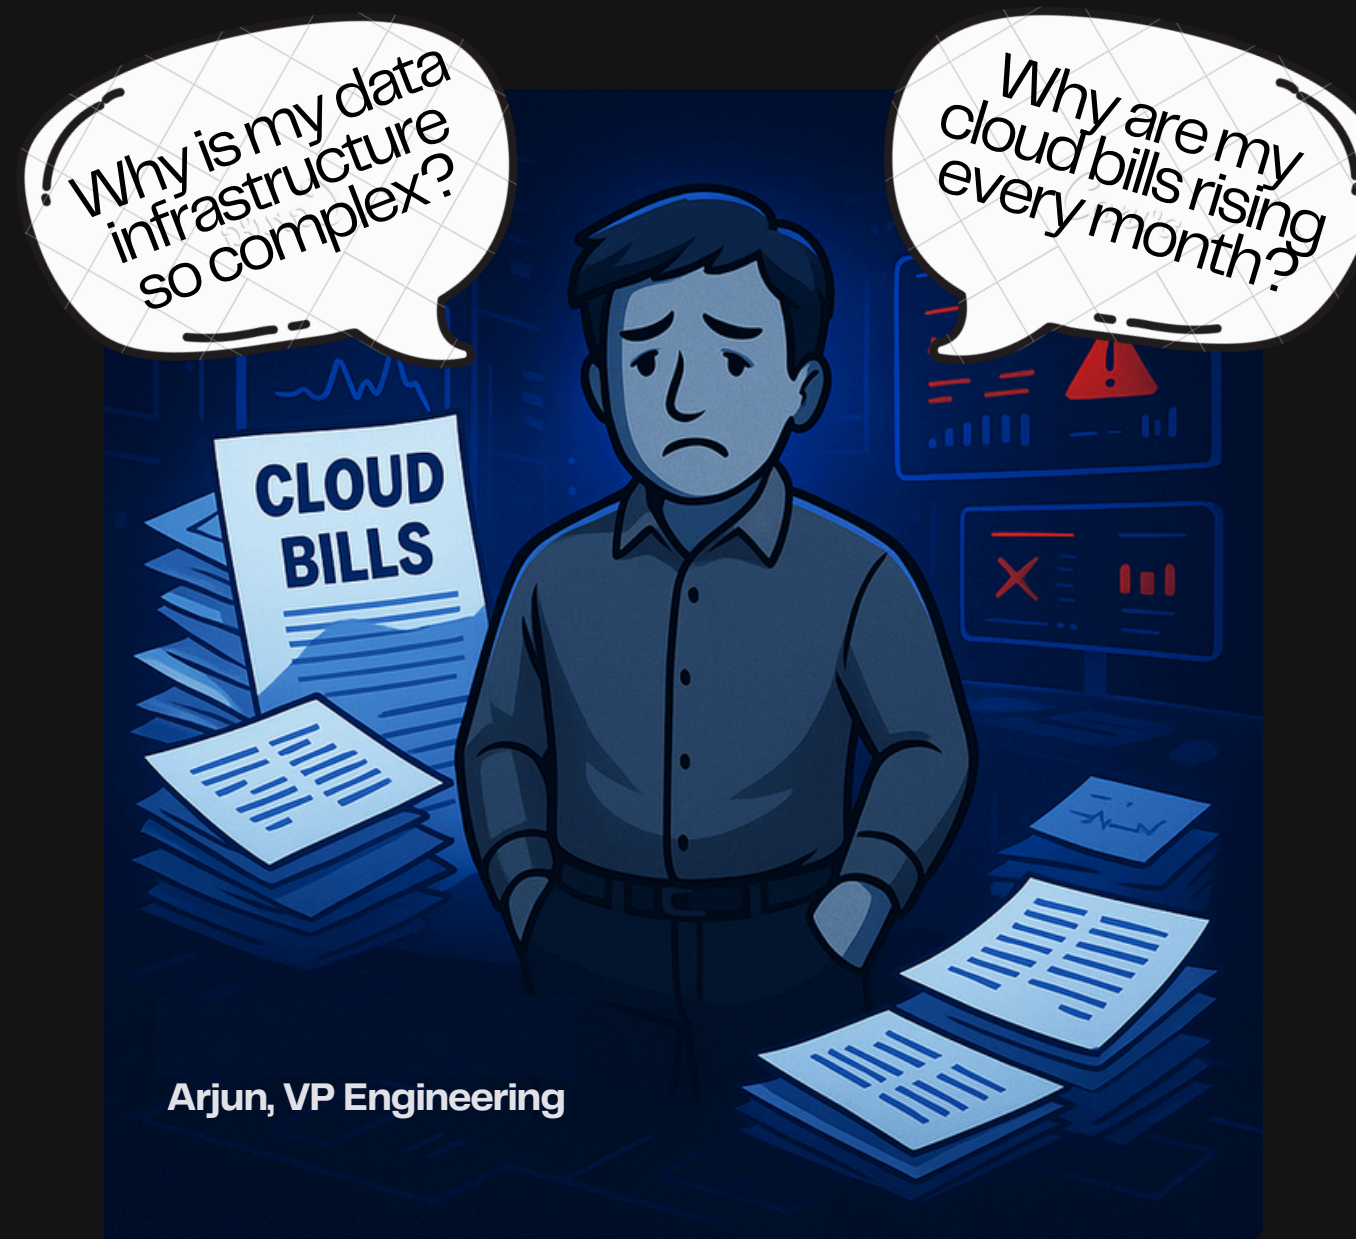

Data Observability

Incomplete visibility across multi-cloud environments. Arjun can't see his entire data pipeline.

Siloed Approach

Tools optimize ONE layer. When Arjun fixes compute costs, database performance breaks.

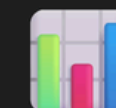

Arjun, VP Engineering

Meet Arjun, VP Engineering in a fast Growing Enterprise

Expertise Gap

Optimization experts cost \$150K+ each. Arjun's budget can't afford specialists.

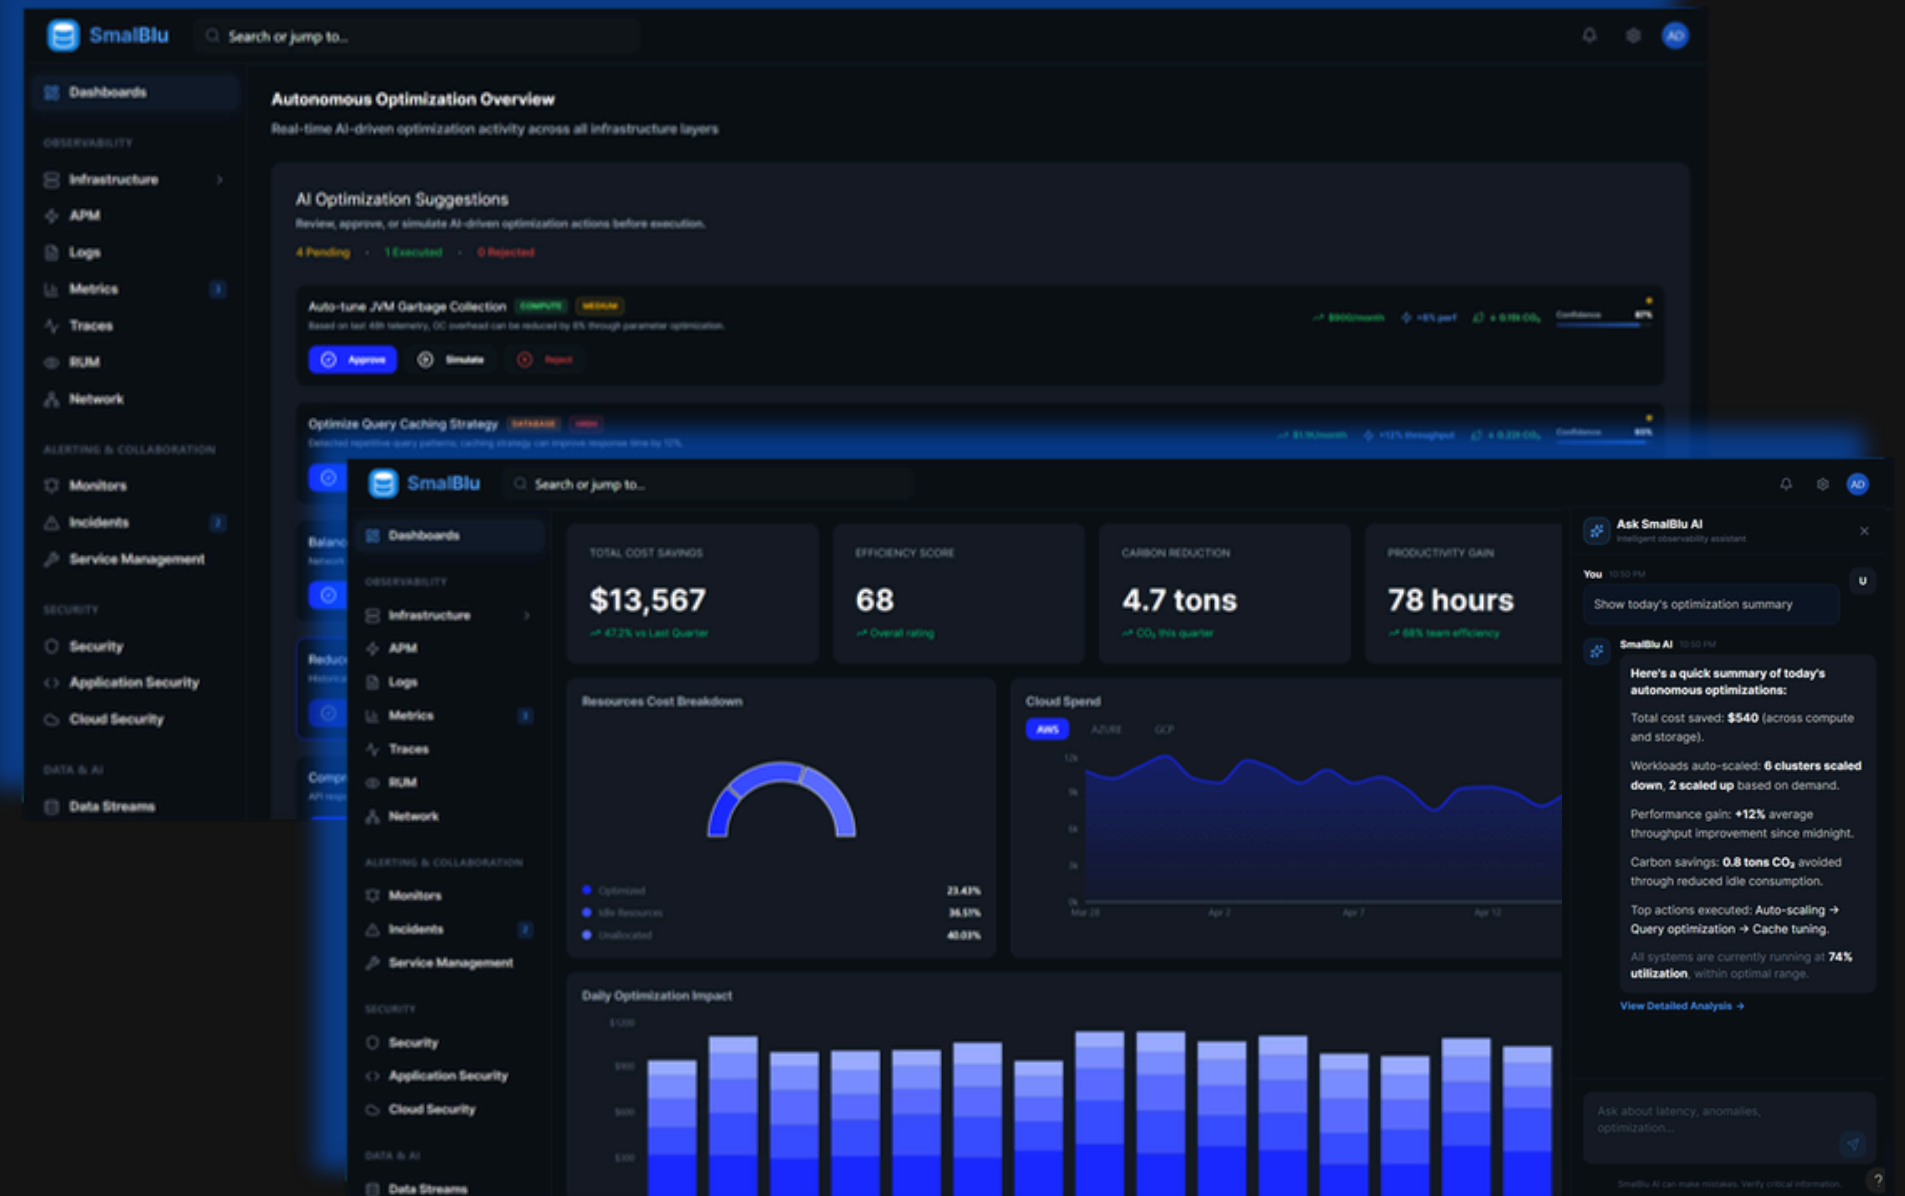

Manual & Static

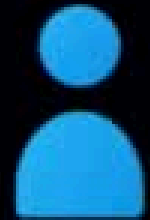

Takes months to analyze. By the time Arjun implements fixes, workloads have changed.

What If Arjun's Entire Data Infrastructure Could Optimize Itself?

Introducing SmalBlu

SmalBlu is an AI platform that autonomously optimises and manages enterprise data and AI infrastructure across cloud and hybrid environments

Layer

is divided into 6 primary layers

Data Infr

Here's Here How It Works

We monitor and optimize your data infrastructure 24/7 across all 6 primary data layers :

User

Application

Compute

Network

Database

Storage

**Full-Stack Data Observability with
NLP interface**

**Only Cross Layer Optimization
Solution across all 6 layers**

**Proprietary Optimisation and
Compression Engine**

**First LLM-powered Agentic System
for continuous & automatic tuning**

Enterprises Using SmaBlu Achieve

40%

Cost Savings – **cut data infra cost**
Verified across test deployments

35%

Carbon Reduction
Lower environmental impact

70%

Reduction in manual tuning
Freeing teams for innovation

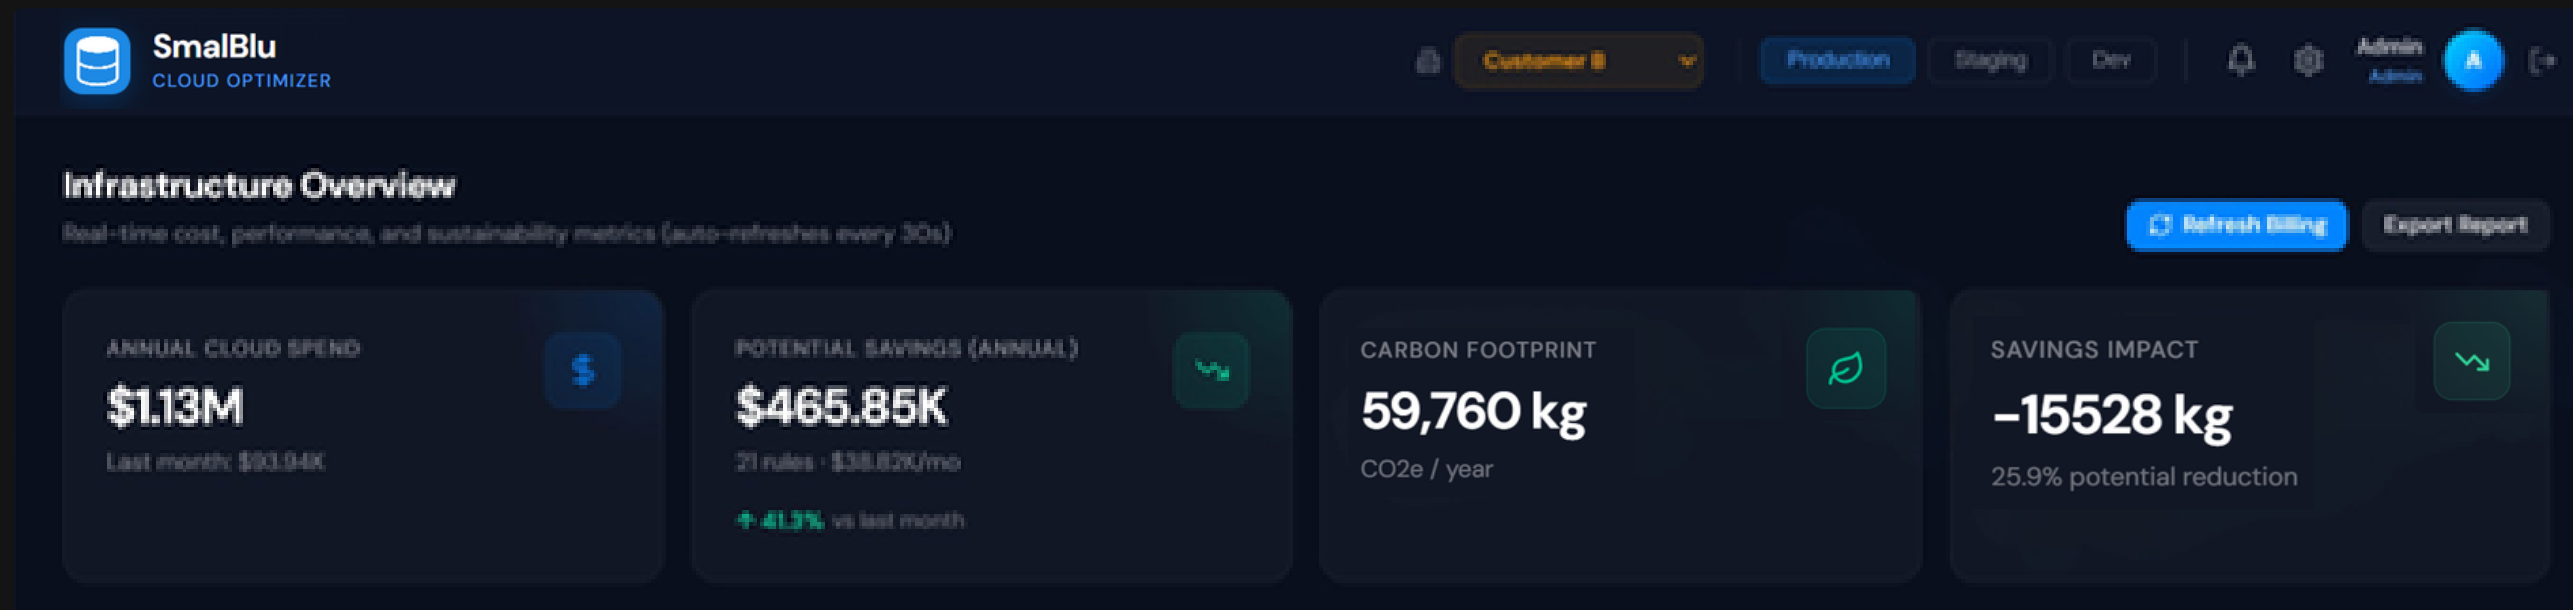

30%

Faster Queries
Improved application performance

Case Studies (5+)

Leading US-Based Ed-tech Company

Cloud Cost ↓ **40 %**

\$500K Saved

CO2 Emission ↓ by **25%**

15 Tons CO2 Saved

Verified via ISO 14067-compliant methodology

MOU

Vigyanlabs

MOU between 4 parties

How You Can Join Our Journey

1

Funding

\$500k USD (~ ₹4.5 Cr)

To scale our MVP and complete 3 paid POCs

2

Networking

Introductions & Connections

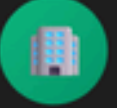

Help us reach the right people in our industry

Clear Milestone

Months 1-4

Complete Enterprise-Grade MVP Development

Months 5-6

Deploy 3 Paid POCs with Brand Enterprises (\$500K+ annual cloud spend)

Verify Clear Demonstrable KPIs:

Carbon Footprint Reduction

Energy Conservation

Cost Optimization

Performance Metrics

Thank You

Recognitions, Global Exposure & Strategic Programmes

One of the top 7 startups invited to pitch at the India-Harvard Conference at Harvard, Boston (14-15 Feb).
Decided not to go.

Hult TOP 2 globally – International
finals in UK – \$1Mn

EO GSEA SEA FINALS – CAPE
TOWN – US\$100,000

SmalBlu has won the Startup
World Cup – India Chapter! 🏆

We'll now be representing
India at the Startup World Cup
Grand Finale in Silicon Valley
this November, competing for
the \$1M global prize.

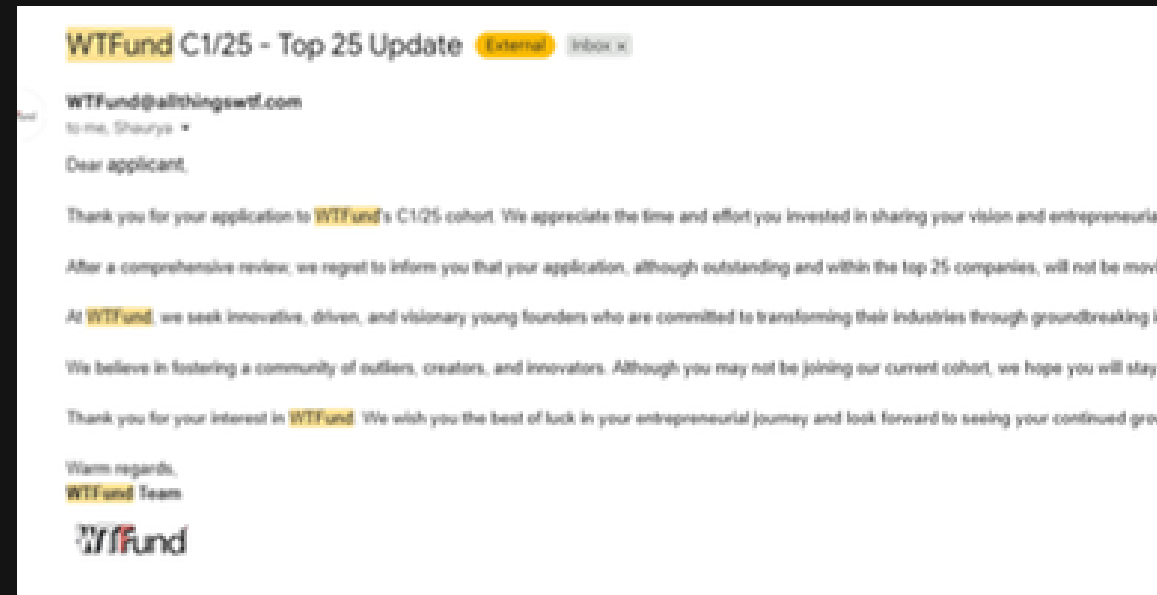

Selected as one of top teams for TiE U
Global Finalists competing with TiE
Vancouver, Atlanta and Seattle

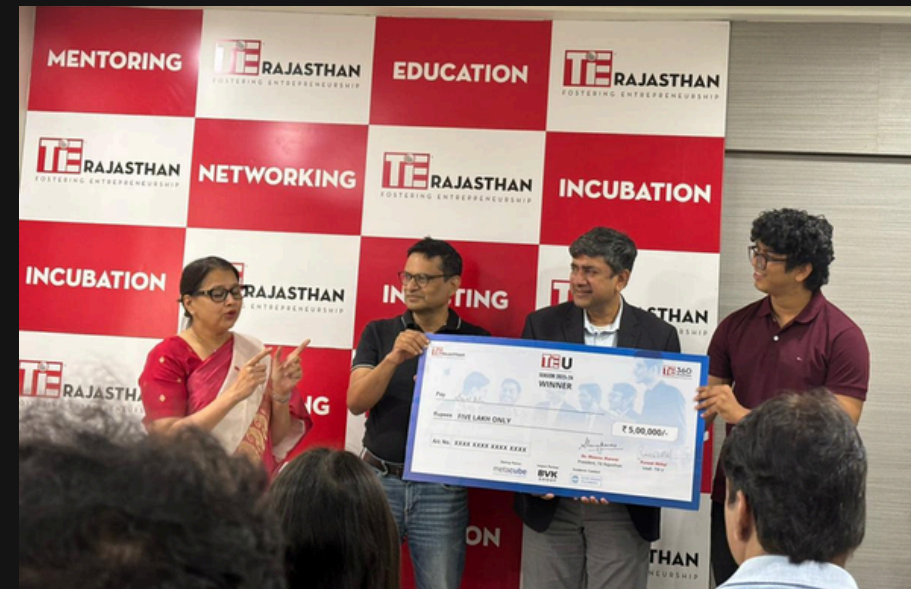

Won EO GSEA INDIA – ₹2,25,000
cash prize. And will now represent in
SEA FINALS

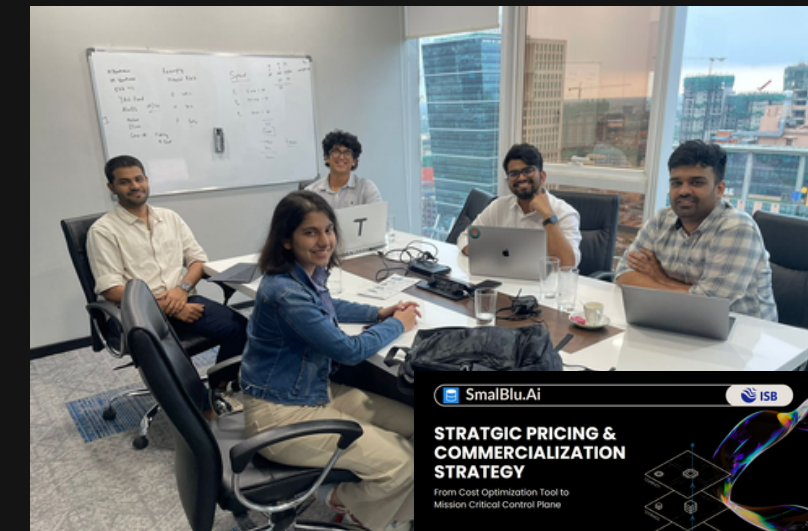

Some recognitions month

WTF TOP 25 IN THE NATION

Winner of TIE U R 2025 – ₹5,00,000 Grant

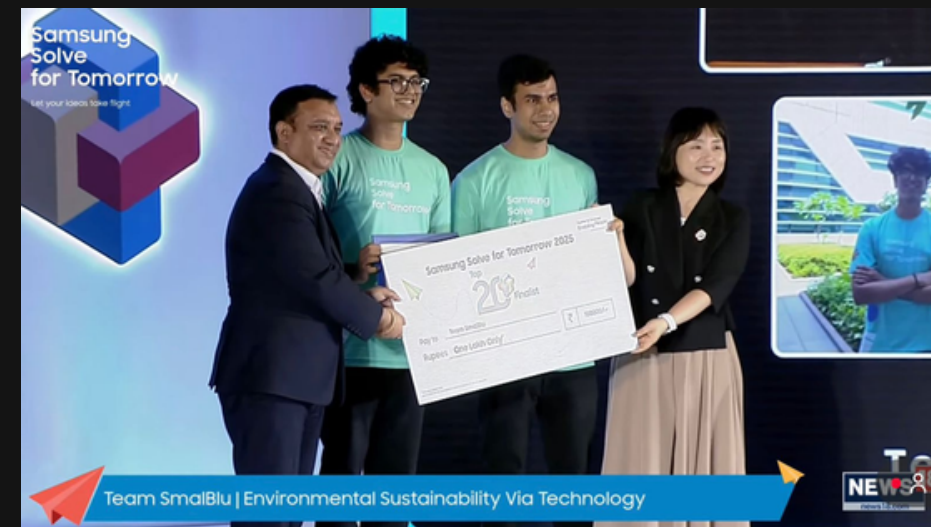

Received ISB Consultant Report (ISB Immersion Programme, Sustainability Mafia sponsored – Rs. 1.5 – 4 Lakh)

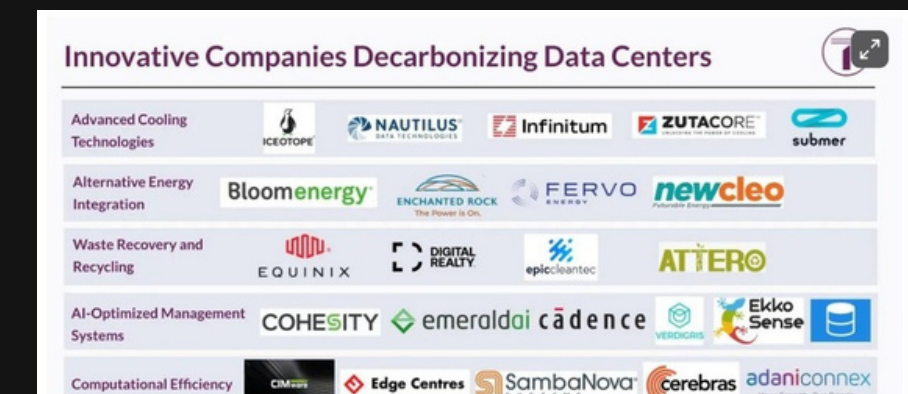

Selected for the STRIDE Accelerator Program (1.0) at Shoolini Peahal Foundation (SPF) and now incubated

SmaBlu at Ahmedabad University Innovation Summit on National Startup Day

Samsung solve for tomorrow – top 5 (Rs 1.2 Lakh)

Theia Ventures recently did a report on Data centres – SmaBlu being mentioned along with names like cadence, Cohesity

AWS | Campus Fund Grand Challenge – Headstart Nationals – Hultz Prize selection + community – Antler DBZ

Climate Impact by 2030

Fully ESG-aligned and audit-ready

Revenue

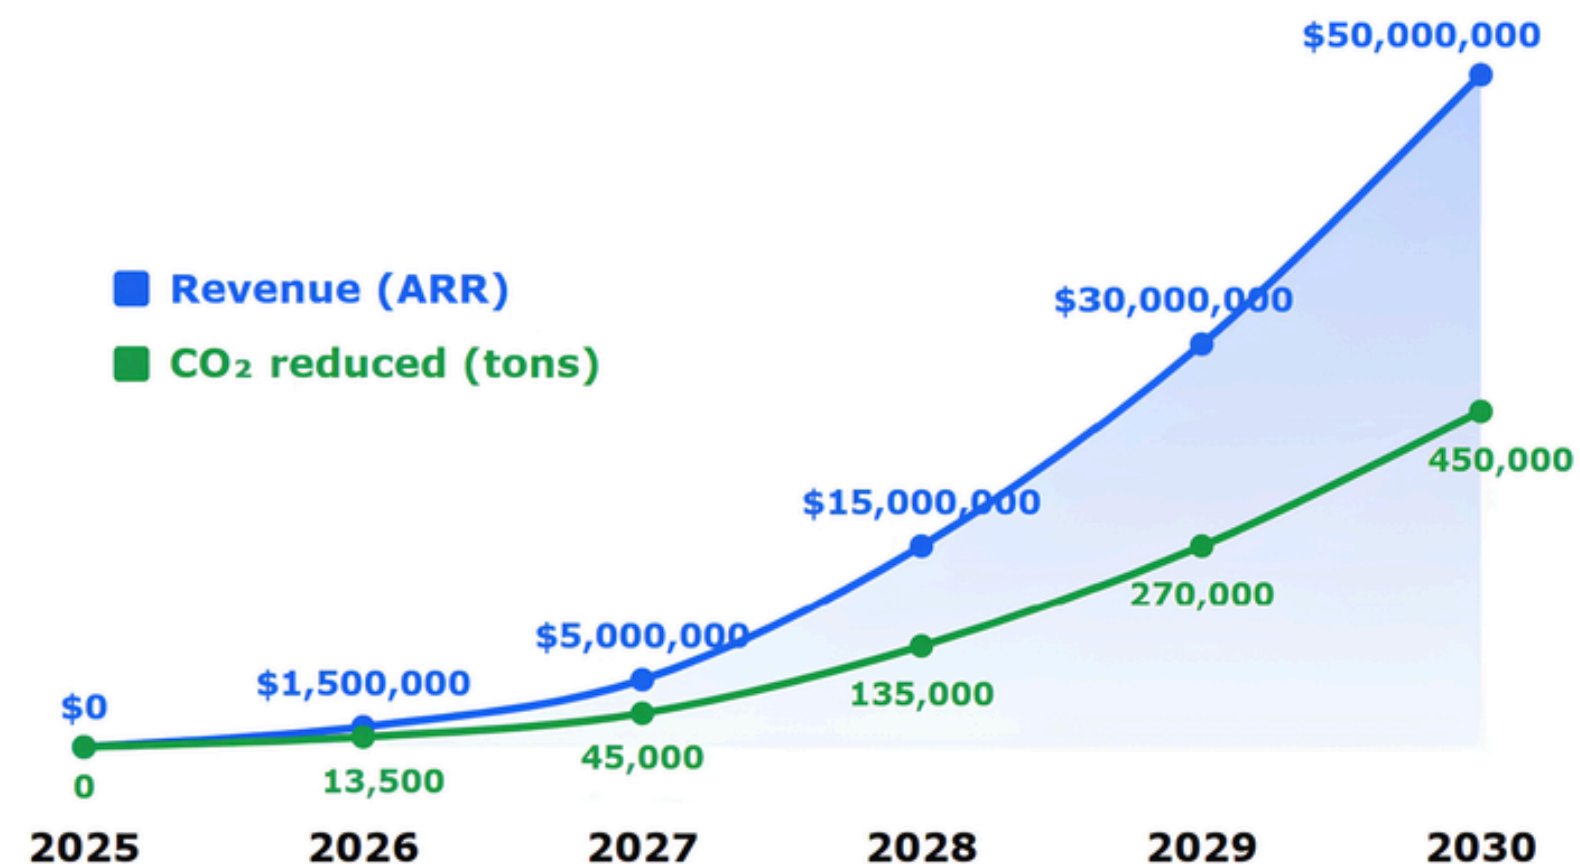

\$50M

projected ARR by 2030

CO₂ reduced

450K tons

equivalent to ~225K homes

As revenue grows, impact grows together.

Business Model – Invest \$1 to save \$4 on your cloud bill

Customer Segmentation

- Growth Companies: \$200K-500K annual cloud spend
- Mid-Market: \$500K-5M annual cloud spend
- Enterprise: \$5M+ annual cloud spend

Distribution Channels

- Self-serve platform for growth companies
- Direct enterprise sales for mid-market & large accounts
- Cloud marketplaces (AWS, Azure, GCP)
- Strategic partnerships with system integrators

Revenue Model

Primary: B2B SaaS based on Infrastructure Under Management (IUM)

Entry Level: 25% of savings

Enterprise: 15% of savings

Customer ROI: 3-5X return guaranteed

Secondary Revenue Model

- Multiple upsell opportunities
- Custom integration services
- Optimization consulting
- Cloud reseller partnerships

Target Segment	Yearly Infra Spend	SmaBlu Pricing	Value Capture (5% to 8% -Cloud spend)
Growth	\$200K-500K	\$2K-4K/month	4x ROI - 8.5%
Mid-market	\$500K-5M	\$4K-30K/month	5x ROI - 7%
Global enterprise	\$5M+	\$30K+/month	6.7x ROI - 5.25%

Our Climate Impact

**Reduce
50 Million +
Tons CO2**

=

**10 Million
Cars Off Road
Forever**

=

**Powering
25 Million
Homes Annually**

Our Mission by 2030

Our Impact Scales Exponentially

5 Minutes
Per enterprise deployment
via software

→

35%
Carbon reduction per
deployment

→

1000+
Enterprises deployed per month
at scale

→

Massive
Environmental impact through AI
automation

ESG Reporting & Compliance

Real-time carbon footprint tracking

Automated sustainability metrics

Climatiq API integration

ISO 14067 compliant reporting

Enterprise ESG dashboard

Verified with Climatiq API - ISO 14067 Compliant

Time is Critical
Every month delayed = 50,000 tons preventable CO₂ wasted

7 AFFORDABLE AND
CLEAN ENERGY

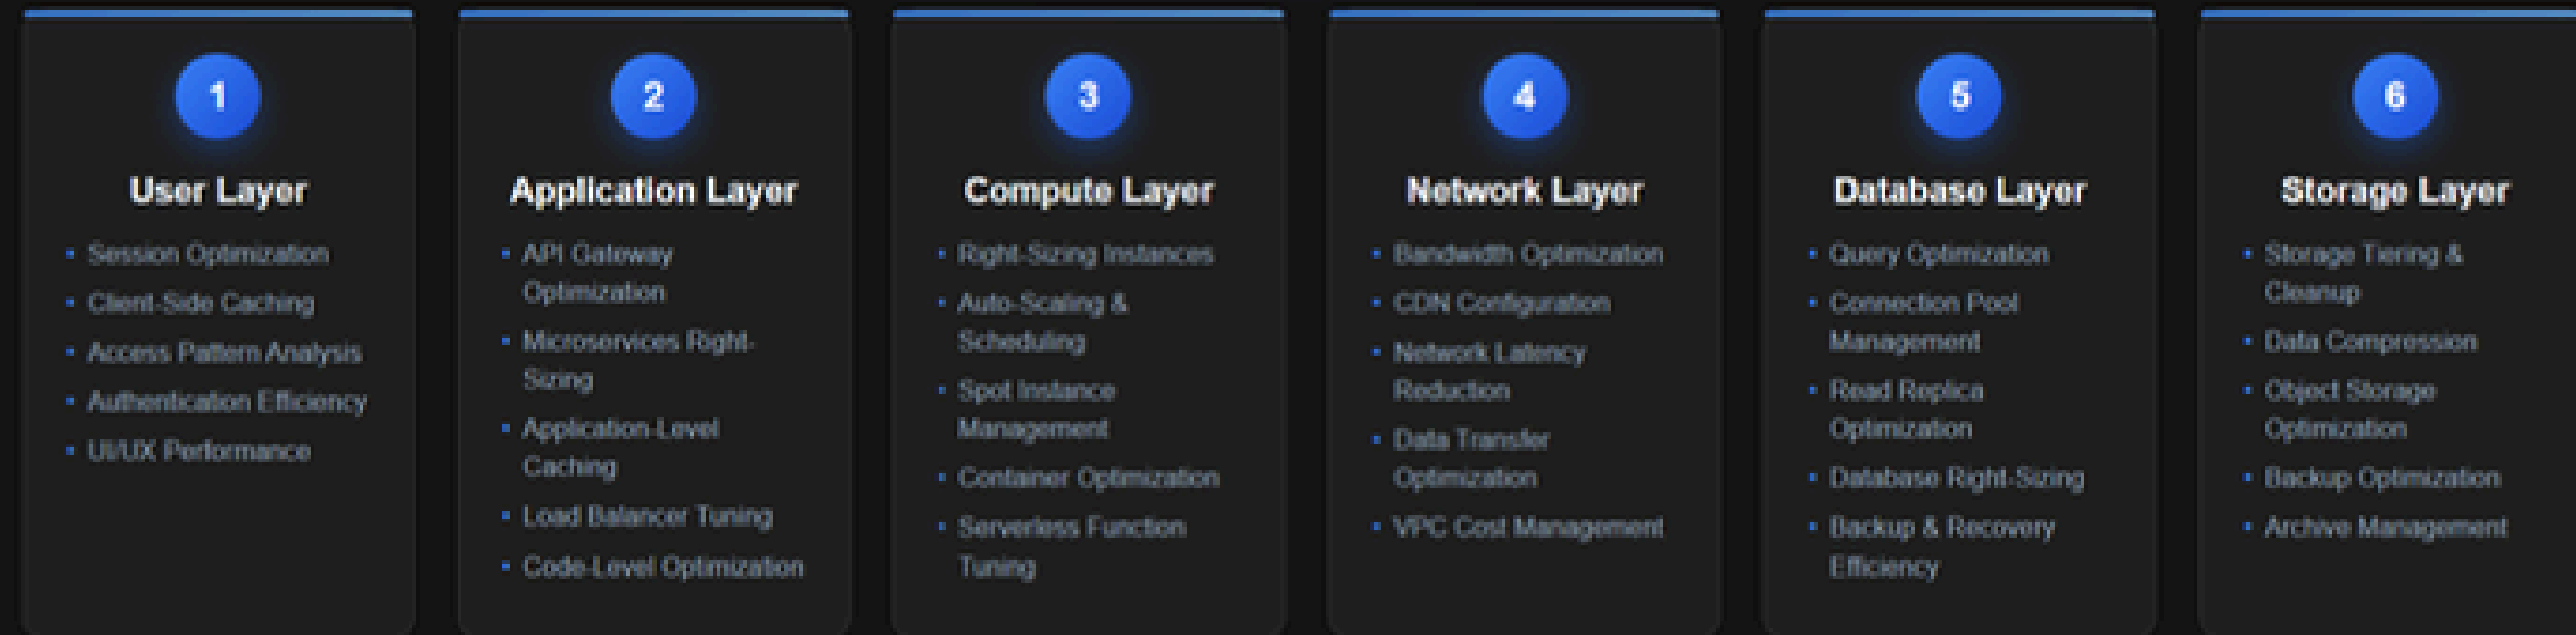

9 INDUSTRY, INNOVATION
AND INFRASTRUCTURE

13 CLIMATE
ACTION

Here's How It Works

Enterprise Data Infrastructure

What Arjun Actually Needs

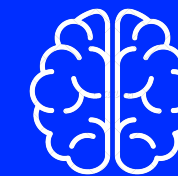

An AI agent that reasons like a human expert across all 6 layers, understands complex interdependencies, and optimizes autonomously - technology that didn't exist until 2024's LLM breakthroughs.

Key Market Differentiators /USPs

Compression Engine

Industry-first technology that intelligently compresses and smartly caches data, reducing storage and load by 35–50%.

First LLM-Powered Agentic System

Advanced AI agent that reasons about your infrastructure in real-time to make autonomous optimization decisions.

Only Cross-Layer Platform

Unique ability to optimise across user, application, compute, network, database, and storage layers simultaneously.

Sustainability & GreenOps Focus

Dedicated to reducing carbon footprint with comprehensive ESG reporting and energy optimization.

Target ICP – BSFI & ICT Sectors

Primary: Mid to large enterprises – **\$500K – \$5M+** & **\$5M+** (Yearly cloud spend)
Decision Makers: CTOs, CFOs, CIOs, VP Cloud Infrastructure, DB Administrators

 India  USA  UAE  Singapore

Access to Enterprise's Most Critical Data

2 years of enterprise deployment =
World's Best LLM for data infrastructure optimisation

FinOps

GreenOps

AIOps

SecurityOps

DataOps

Data Privacy & Security

- ✓ Only metadata is accessed
- ✓ The data never leaves the user's environment
- ✓ Enterprise Grade Apache Kafka Connectors for seamless integration
- ✓ We use opensource LLM model
- ✓ Strong Guardrails with human-in-loop oversight and full safety rollback

Certifications :
(in pipeline)

Aligned with CISO security frameworks and vendor compliance matrices
